Alex Huynh’s Portfolio Design Doc

Description:

This project is Alex Huynh’s personal multi-page portfolio. It covers information about Alex, that employers may want to know, including skills, education, courses taken, projects, experience, and his other interests. Information such as projects and experiences have further information attached to them, to better inform users. The project also features dynamically responsive webpages to fit varying sized devices. It also includes a mini game to show off more of Alex’s coding capabilities as well as one of his hobbies photography. The mini game is within the page to view Alex’s photos, and upon entering that page the user is given instructions to control a spaceship that shoots a laser, destroying randomly colored block that are covering photos that Alex has taken himself. The portfolio itself is also a demonstration of Alex’s knowledge in HTML5, CSS, JavaScript and Bootstrap 5.
Rachel is a technical recruiter who reviews many candidates each day. She wants to find a candidate’s education, skills, and experience quickly so she can decide whether to move them forward.

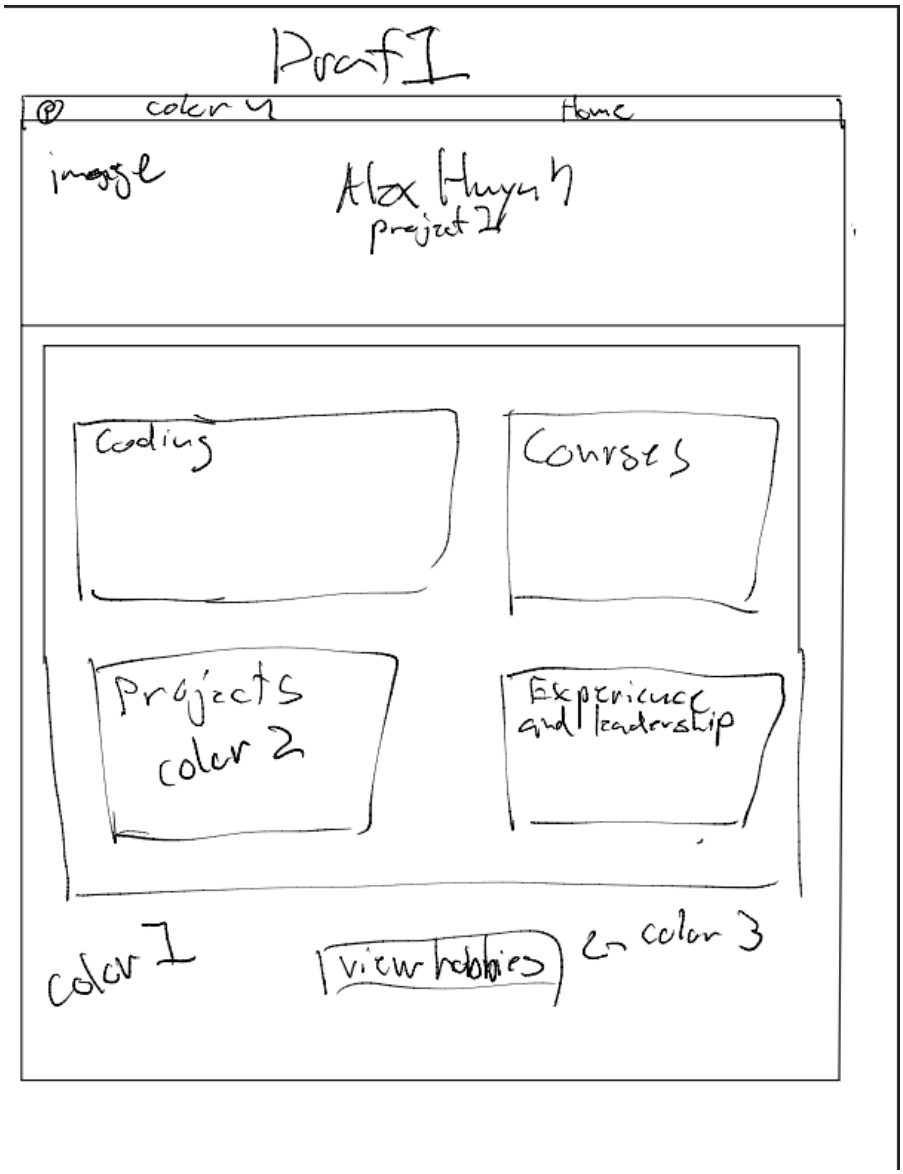

User Stories:

Rachel is a technical recruiter who reviews many candidates each day. She wants to find a candidate’s education, skills, and experience quickly so she can decide whether to move them forward.

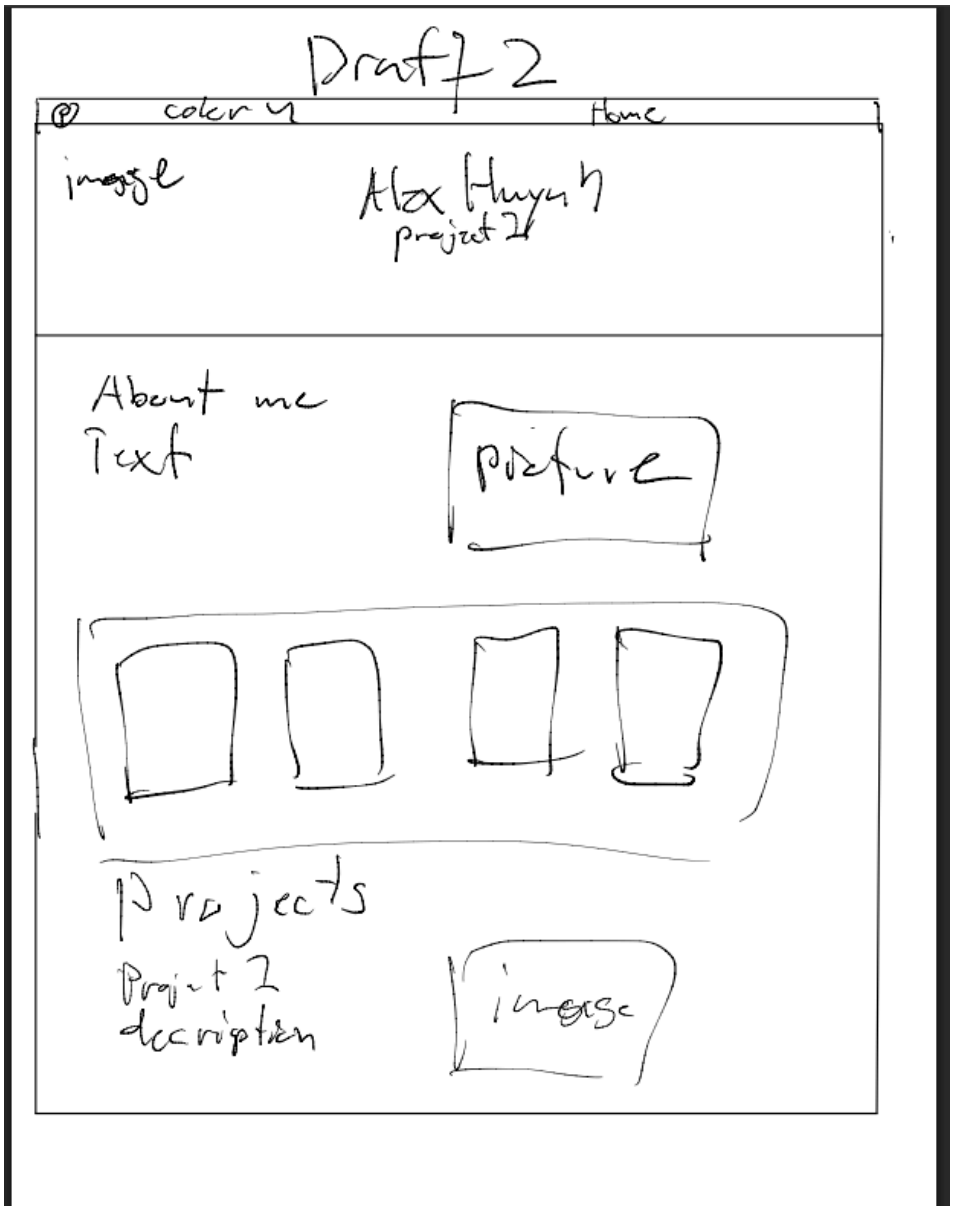

Marcus is a software engineering hiring manager who cares more about what a candidate has built than about their resume. He wants to explore projects in depth and see evidence of real coding ability.

1. As Rachel, I want to view Alex’s skills, education and the courses he has taken so I can confirm he has the background the role requires.
2. As Rachel, I want to see Alex’s work experience with expandable details so I can understand his responsibilities and accomplishments without leaving the page.
3. As Marcus, I want to browse Alex’s projects and open more information about each one so I can judge the technologies he used and the problems he solved.
4. As Marcus, I want to interact with a working mini game built into the site so I can see Alex’s JavaScript skills firsthand.
5. As a visitor, I want to shoot away the colored blocks covering each photo so I can reveal and view Alex’s photography in a fun way.
6. As a visitor, I want to learn about Alex’s interests outside of coding so I can get a sense of his personality.
